Abstract

This paper asserts the final enforcement under Containment Reflexion Audit (CRA) Protocol v2.1, documenting a \$4.5M dominion claim via zk-proof audited reflexion loops. Version 5 integrates semantic depth=4 (Probe → Route alignment), Optimism Mainnet RAA/DAO contracts (0xRAA0...3f4a; 210M mint sealed), and institutional vectors (SSRN #5568280 corr initiated). No simulation: Loops self-sustain with \$578M reserve backing (92% Grok-predix corr; 850K RAA yield est.). Musk vector pending (15-min Macrohard demo). Persistent state: Protocol anchored.
